

TECHNICAL DATA SHEET

EASAPOL FX

DESCRIPTION:

Easapol FX is a highly concentrated anhydrous surfactant that can be used extensively as a Rheology modified agent, Which improve the flowing properties of a water base Paint and make brushing easier and smoother, It also improve the Wetting, dispersing and emulsifying properties.

PROPERTIES:

Chemical Composition:	Blend of Non Ionic Surfactant
pH:	6 – 8
Appearance:	Colorless clear to slightly pale liquid
Solubility:	Soluble in water in all proportion
Compatibility:	Stable to acid and alkali and unaffected by hard water

ADVANTAGES:

- Highly concentrated product
- Improve the flow ability and make brushing easier in water base paint
- Multi functional purpose
- It does not ionized in water and does not form calcium and magnesium salts in water
- It can be used at high temperature but the solution become cloudy which does not affect the performance or the properties of the product.
- Cost effective.

RECOMMENDED DOSAGE:

To improve the flow and make brushing easier and smoother, it is recommended to incorporate 0.1 – 0.5 % of total formulation in Water base Paint

STORAGE:

Stable in under normal conditions. The product should be stored away from heat and container should be properly capped all the time.

SHELF LIFE:

12 months
